

florinotex®

Strong against weeds, naturally effective

Ground cover fabric: indispensable in professional horticulture

florinotex® provides an effective and environmentally friendly solution for weed control—without the need for chemicals.

It creates a clean, stable surface for plant cultivation, reduces long-term maintenance, and supports consistent growing conditions. Thanks to its water permeability, the soil beneath remains well-ventilated and moist, preventing waterlogging. Especially in professional horticulture, ground cover fabric promotes order, efficiency, and healthy plant development — making it ideal for use in greenhouses, nurseries, planting beds, and walkways.

Precisely processed with a uniform, dense weave – ensuring maximum safety and reliability in application.

Your advantages at a glance:

- ✓ Water-permeable and breathable — for healthy soil conditions
- ✓ Weed-inhibiting — the almost complete impermeability to light effectively suppresses unwanted growth, completely without chemicals
- ✓ Extremely tear-resistant and durable — even under heavy use
- ✓ UV-resistant — for long-term outdoor use
- ✓ Simple installation and precise cutting to size
- ✓ Green marking strips for precise positioning of plants and crops
