

Premium
Underlayer film

Die Regeneratfreie

Safety right from the start

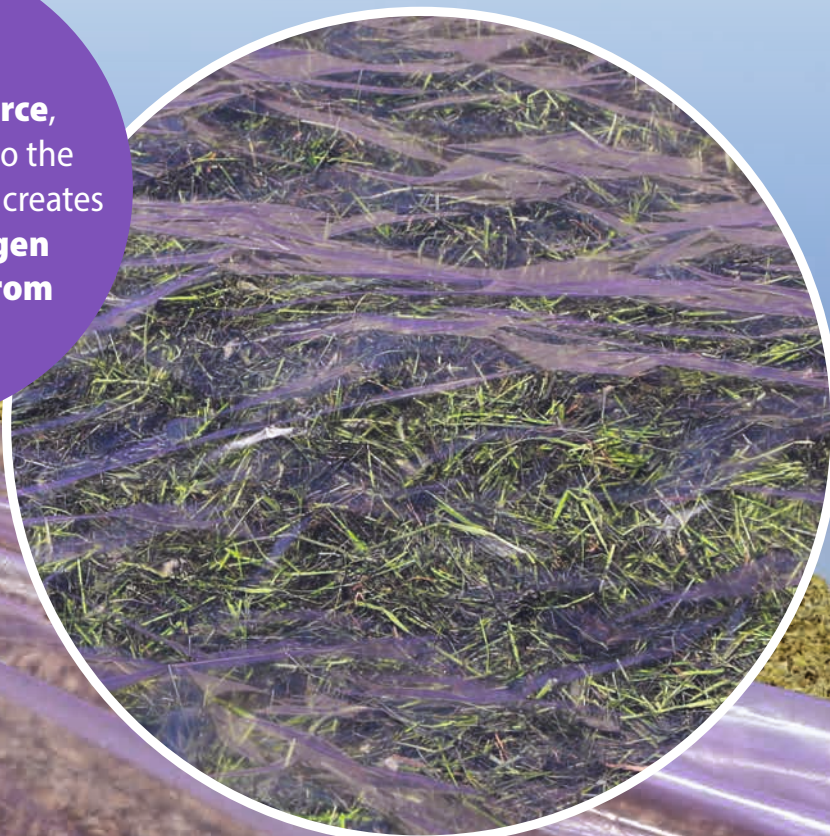

Underlayer films remain an essential component of professional silo coverings. Thanks to its unmatched adhesive properties, **agrifol® „DIE REGENERATFREIE“** is the leading brand, providing the ideal foundation for efficient and cost-effective silage preparation.

Because this film comes into direct contact with the silage, it is manufactured exclusively from **high-quality virgin raw materials**. By deliberately avoiding recycled plastics, the risk of unwanted contaminants or residues from recycled material entering the feed is minimized. **For maximum safety – protecting both animals and people.**

Recognizable by the soft
purple shade • 40 µm

Due to the
high adhesion force,
it adapts optimally to the
fresh silage and thus creates
a **maximum oxygen
blockade right from
the start.**

- ✓ **Virgin materials** – Pure raw materials free from waste plastics
- ✓ The first underlayer film to receive a **DLG quality seal**
- ✓ **Superior adhesion** and **maximum oxygen blockage**
